

# GEAR PRODUCTS

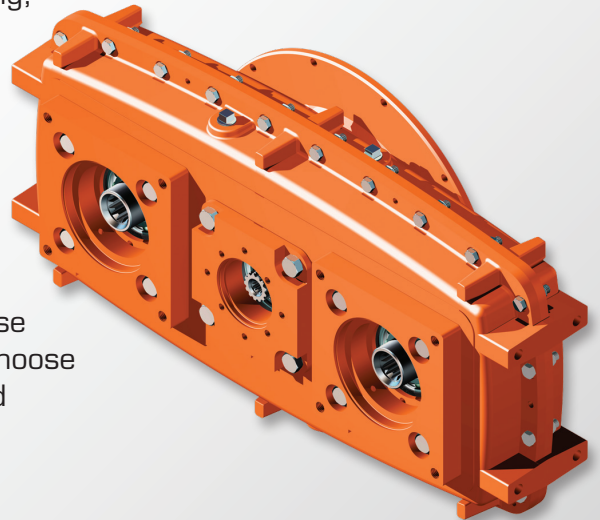

Gear Products is a world-leading manufacturer of mechanical power transmission components for use in markets including, but not limited to off-highway trucks, cranes and heavy equipment.

Every day, Gear Products modular hydraulic pump drives, slewing ring bearings, rotators, and swing drives are put to work in the utility, petroleum, construction, agricultural, forestry, marine and mining industries—delivering the superior quality and long-lasting performance our customers have come to expect.

Gear Products offers one of the largest product ranges and widest selections of standard and custom-engineered mechanical transmission components anywhere. Our attention to detail and customer responsiveness are the result of our commitment to products that address the complex requirements and applications of today's industries challenges.

You could say the backbone of our success is a combination of the finest in man and machine—advanced technology, precision manufacturing, and a team of dedicated professionals all working in concert to keep vital industries online and on time.

The bottom line?  
When industries choose Gear Products, they choose innovation that's ahead of industry change.

# Innovation. Ahead of Industry Change.

Since 1957, Gear Products has set the world standard for mechanical power transmission components by listening to our customers and responding with innovation ahead of industry change. To that end, we've become the go-to partner for custom-engineered and standard components that address tomorrow's challenges and expectations.

## Hydraulic Pump Drives

Gear Products offers one of the widest selections of standard and custom-engineered hydraulic pump drives anywhere—with models that cover horsepower ratings from 325 hp to 1200 hp, and more than 5,000 configurations, gear ratios and hydraulic pump adaptors. Our modular design provides maximum flexibility and component adaptation for every application.

## Slewing Ring Bearings

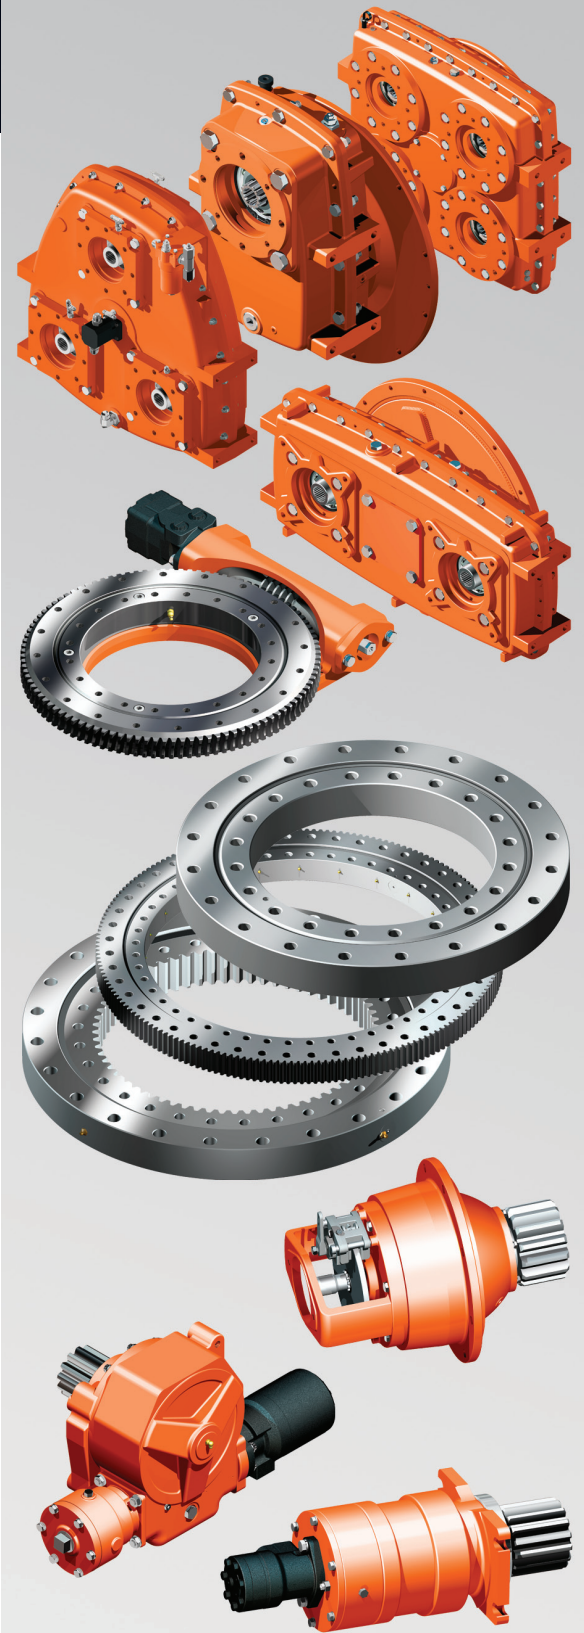

Whenever a smooth, exactly-controlled, continuous or intermittent rotation of a moment arm is required, Gear Products offers high quality, low-friction slewing ring bearings that are custom engineered for your application such as those associated with truck cranes, digger derricks, aerial platforms, wind turbines and construction hoists.

## Rotators

Gear Products rotators are custom-engineered to specific applications, ensuring longer gear life. As an ideal alternative for small-to-medium moment capacity applications (up to 150,000 ft. lb.), Gear Products rotators are smaller, less expensive, and easier to mount when compared to a worm gear drive and slewing ring bearing combination.

## Planetary and Worm Swing Drives

Designed and constructed specifically for high-torque, low-speed, continuous duty rotation systems, Gear Products offers a range of swing drives featuring heavy-duty pinions for repeated dynamic shock and side-load reliability. Both static and dynamic brakes are available on select models.

As a leader in product innovation, TWG is committed to the ongoing improvement of its equipment. TWG reserves the right to make changes to our products without notice.
