

Winch Power. Built to Order.

Wherever the world needs lifting and pulling, Pullmaster® is there—providing the winch power global industries depend on to work safer, smarter and more efficiently.

Pullmaster Winch Corporation is one of the world's leading manufacturers of planetary hydraulic winches built to order for the commercial fishing, logging, heavy construction, drilling, mining, dredging, and marine construction industries. From our computer-controlled manufacturing facility in Vancouver, British Columbia, Pullmaster builds winches for specific applications using the finest materials, superior engineering and the highest quality craftsmanship. Pullmaster's applied computer technology, integrated manufacturing and computerized production machinery are used in conjunction with our ISO 9001:2000 Quality Management System to produce world-class planetary products.

With one of the industry's most knowledgeable teams of engineers, service technicians, and worldwide distributors, Pullmaster delivers the reliable, high-performance operation and long equipment life you need to get the job done—no matter where you are.

Power That's Built to Order.

And when we say built to order, we mean it. Pullmaster Winch Corporation manufactures a comprehensive line of planetary hydraulic winches that are built for your specific application. Whether you need equal speed, rapid reverse, recovery or free fall, Pullmaster winches deliver the quality, performance and outstanding reliability you can depend on.

Equal Speed

Pullmaster Equal Speed planetary winches offer maximum torque in both directions of rotation and give operators maximum control over the load. In applications that require precise lifting and lowering and load suspension, Pullmaster Equal Speed winches deliver the industry's most reliable performance. Ideal for a wide range of applications or special operations.

Rapid Reverse

Pullmaster Rapid Reverse planetary winches provide reverse speeds that are 4.5 times faster than forward speeds. In applications that include lighter loads or swing functions, Pullmaster's Rapid Reverse winches create less resistance and increase cycle times and productivity. Ideal for a variety of applications including fishing, dredging and marine applications.

Free Fall

Pullmaster hydraulic planetary winches with Free Fall enable operators to lift and lower loads at controlled speeds or lower at high velocities. Pullmaster's Free Fall option is available in Emergency Free Fall, Controlled Free Fall or Combination Emergency and Controlled Free Fall on several Pullmaster Equal Speed or Rapid Reverse winch models.

Recovery

Pullmaster Recovery winches are ideal for pulling and recovering heavy equipment and vehicles. Pullmaster offers four winch models specifically designed for heavy-duty recovery operations.

As a leader in product innovation, TWG is committed to the ongoing improvement of its equipment. TWG reserves the right to make changes to our products without notice.
